### DETAILED ACTION

1. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.

#### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 -12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murata (2002/0039651) in view of Maeda et al (4,572,888).

Murata disclose a film for a display (plasma, LCD, CRT, EL, etc.) comprising a transparent substrate, a high refractive index coating, and a low refractive index coating. The high refractive index coating comprises an acrylic resin and an oxide particle of titanium, zinc, antimony, tin, zirconium, or aluminum ([0028]). The low refractive index layer comprises silica or magnesium fluoride particles of 5 to 30 nm ([0029]-[0032]). The reference fails to specifically point out acrylic resins that are useful in the invention.

Maeda et al disclose a UV sensitive photopolymerizable resin comprising (meth)acrylic resins such as many of those mentioned to be useful by Murata. In addition to those listed by Murata, the reference teaches that other known and useful acrylic unsaturated compounds include the ethylene oxide adduct of trimethylol propane triacrylate. It's use increases the adhesive properties of the material.

Art Unit: 1752

Given the teachings of the references it would have been obvious to one of ordinary skill in the art to prepare the material of Murata choosing to employ the known monomer of Maeda et al.

*Conclusion*

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nikaidou et al (6,602,643) and Kominami et al (5,663,211) are cited for teaching similar compounds.
